HOW TO READ INFLATION RATES

The inflation rate is generally presented as an annualised rate. This means that it records the change in prices over a period of 12 months. So when we say that the inflation rate in September 2011 was 5.7%, we mean that prices increased by 5.7% from September 2010 to September 2011.

Inflation rates tell you what has happened to prices already. They are not forecasts of future inflation. Having said that, looking at past inflation trends together with an understanding of what is happening to prices now can assist in making short term predictions.

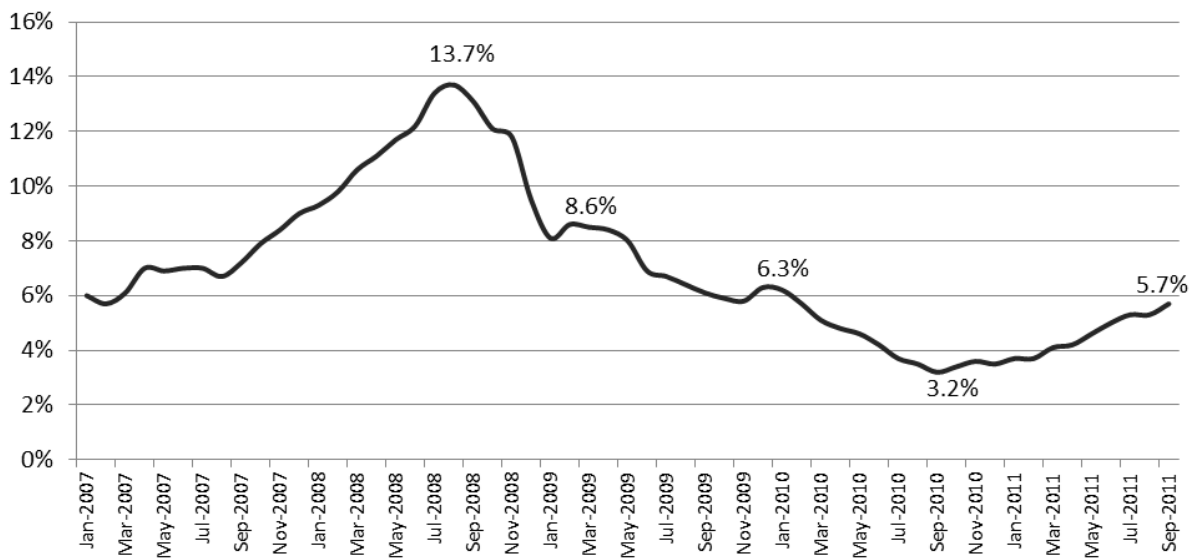

The October 2011 Inflation figures will be released on the 23rd November 2011

CPI PER EXPENDITURE GROUP

	Groups	Monthly expenditure	Inflation rate September 2011
1	Very low	R1213 per month	6.8%
2	Low	R1213 up to R1939 per month	6.6%
3	Middle	R1940 up to R3062 per month	6.4%
4	High	R3063 up to R6596 per month	6.5%
5	Very high	R6596 and more	5.3%

The table above provides the estimated monthly spending for different groups and the impact of inflation rate for these groups. The very low group experienced an inflation rate of 6.8%, higher than headline inflation rate of 5.7%. This is an indication that the very low group is hit harder by inflation compared to the very high group which recorded an inflation rate of 5.3%.
