

INFLATION MONITOR

OCTOBER 2024

A simplified version of inflation data for trade union negotiators.

Consumer price index slowed to 2.8% in October 2024

Inflation is a sustained increase in the prices of goods and services. It is measured as an annual percentage increase, for example, from October 2023 to October 2024. A falling inflation rate means prices are still rising, just more slowly.

The **annual headline inflation** rate slowed to 2.8% in October 2024, down from 3.8% in September 2024. The Consumer Price Index (CPI) saw a month-on-month decrease of 0.1% in October. **Food price** inflation dropped to 2.8% in October, compared to 4.1% in September. **Transport** inflation, however, worsened, falling further to -5.3% in October from -1.1% in September. **Public transport** inflation rose to 0.9% in October from 0.7% the previous month. The administrator's price index declined to -1.4% in October from 2.1% in September.

Statistics South Africa divides monthly household expenditure into 10 deciles. Expenditure in decile 10 was higher than expenditure in decile 1, indicating extreme inequality.

Table 2: Annualised inflation by expenditure group | October 2024

There is more than one inflation rate. Different groups, from the very poor to the rich, can experience different rates of inflation because they buy different things. The very low spending group (decile 1) experienced an inflation rate of 4.7%, which was 1.9% higher than the headline annualised inflation rate of 2.8%, while the very high spending group (decile 10) had an inflation rate of 2.8%, which was the same as the inflation rate of 2.8% in October 2024.

The provinces with annual inflation rates equal to or below the headline rate were Limpopo (2.5%), Mpumalanga (2.5%), Northern Cape (2.6%), Gauteng (2.6%), North West (2.7%), Eastern Cape (2.8%), and KwaZulu-Natal (2.8%). Free State (3.2%) and Western Cape (3.4%) recorded inflation rates higher than the headline rate.

The consumer price index is known as the headline inflation rate and is also called the official inflation rate. The monthly prices of over a thousand goods and services are used to calculate the CPI.

An administered price: The price of a product deliberately fixed by a single producer or group of producers and/or any price that may be determined or influenced by the government, either directly or through one or more government agencies/institutions, without reference to market forces. Examples include school fees, telephone charges, electricity, trains, petrol/paraffin, mobile phone calls and public transport. This rate is part of the overall CPI inflation rate.

The November 2024 CPI figures are expected on 11 December 2024
